Career Opportunities in ASSOCIATIONS

Description of the field
Associations are grouped under the headings of professional associations (existing to serve the interests of a professional group), trade associations (serving business interests), or groups of individuals with a common interest (such as philanthropic and charitable associations). There are approximately 22,200 national associations and 115,000 associations with state, regional, or local scope in the United States. In addition, approximately 22,300 multinational, binational, and non-US national associations operate internationally. The majority of associations in the US are headquartered in Washington, DC, New York, or Chicago.

Career Paths
More associations are becoming involved in the international arena, partly due to an expansion of organization memberships to include non-US members, and partly due to an upsurge in opportunities for entering new overseas markets. As a result, associations are hiring full-time personnel who are skilled in international operations. Duties can range from developing new chapters or affiliates outside the United States, to marketing the organization's products and services internationally.

In a trade association, employees plan trade missions to specific countries or develop reports on the export potential of its members' products. In addition, trade association employees may organize a group of members to participate in overseas trade shows or help recruit overseas exhibitors to the association's exposition in the United States. Professional societies often work with the organization's overseas counterparts to co-sponsor a technical or educational meeting. Employees may also be involved in translating the organization's publications into one or more languages, or developing an international certification program.

Entry-level positions and salaries are based on education, experience, geographic location, size, and budget of the association. The salary range for people with graduate degrees in public policy, international affairs, business, economics, political science, or law, who serve as analysts, policy specialists, management, and government affairs assistants, is between $30,000 and $50,000. Salaries for directors of entire departments range from $65,000 – $75,000 and up depending on the department.
Finding a job in an association is the same as finding a job in any other organization. The American Society of Association Executives (ASAE) suggests job seekers network, contact ASAE people in their geographic area, browse trade publications and directories, consider interning at an association, or join an association to locate employment opportunities.

Government affairs specialists will spend a considerable amount of time monitoring government activities to identify public policy that could affect members; therefore, they should have a solid understanding of government procedures and an intimate knowledge of key issues surrounding the association’s profession or industry. Association staff may, from time to time, testify before congressional committees. Students often end up working either on national legislation in an advisory or advocacy role, or on standards, policy, and treaty obligations through international organizations. Additional duties may include: arranging conventions, meetings and seminars; functioning as sales and marketing staff; fulfilling roles in finance, government relations, publishing, fundraising, public speaking; and working with an association’s board of directors.

**Sample Employers**

Associations can be found for most industries (e.g. Chocolate Manufacturers Association), service sectors (National Restaurant Association), professional associations (American Bar Association, National Governors Association) policy issues (Coalition for Gun Control, National Rifle Association), and health concerns (American Diabetes Association, American Lung Association). Browsing the websites of a range of professional, trade, charitable and philanthropic associations will provide additional information on the scope of association activities and missions. The cross-section of associations listed below may be a good place to start:

- American Automobile Association (AAA) – [www.aaa.com](http://www.aaa.com)
- American Council on Education – [www.acenet.edu](http://www.acenet.edu)
- Association of Southeast Asian Nations – [www.asean.org](http://www.asean.org)
- Environmental Defense Fund – [www.edf.org](http://www.edf.org)
- National Academy of Sciences – [www.nas.edu](http://www.nas.edu)
- National Association of Manufacturers – [www.nam.org](http://www.nam.org)
- US Chamber of Commerce – [https://www.uschamber.com](http://www.uschamber.com)

**QUALIFICATIONS TO ENTER THE FIELD**

- Good coordinating and planning skills
- Excellent communication skills
- Ability to manage people
- Knowledge of financial management
- Public relations skills
- Ability to work on a team
- Ability to communicate well to a group
- Ability to explain complex issues in simple terms
- Proficiency in a second language
- Excellent writing skills
- Experience working or studying in other cultures
- Familiarity with international government relations
- Sound understanding of the fundamentals of intercultural communication
